Keeping Trucks Cool and Fleets Moving: Meet Quick Fit Parts

A Mississauga-based supplier built on trust and knowledge is helping Canadian fleets cut downtime on one of the costliest systems in a heavy truck.

When a heavy truck's cooling or air-conditioning system fails, the part is rarely the biggest cost. The real cost is the truck sitting in the bay instead of earning on the road. Quick Fit Parts was built around that reality.

Based in Mississauga, Ontario, Quick Fit Parts supplies heavy-duty truck and semi-truck parts with a clear focus on cooling and climate systems. Its catalogue covers radiators, charge air coolers, reservoir tanks, and the full A/C system: compressors, condensers, evaporators, driers, expansion valves, switches, lines, O-rings, and lubricants.

Built from the ground up

The company's story starts with its founder, Hasti Tehrani, who arrived in Canada with no background in trucks. Instead of seeing that as a barrier, the founder spent roughly a year studying truck technology through manuals, books, and online resources before opening the business. That hands-on, learn-it-properly approach still shapes how the team works with customers today.

Quick Fit Parts describes itself as the first to launch an online marketplace dedicated to quality truck cooling-system parts. Today, fleets and repair shops can search by year, make, and model, by VIN, or by OEM number to find exact-fit parts, an important safeguard when similar-looking components can differ in critical ways.

Coverage across the major makes and across Canada

The company stocks parts for Freightliner, Volvo, Kenworth, Peterbilt, Mack, International, Western Star, Ford, Sterling, and Hino, from trusted brands including Sanden, UAC, Autokool, Cancore, Errecom, Group Parts, and its own QFP line.

From its Mississauga office, Quick Fit Parts serves customers through distribution warehouses in Montréal, Ottawa, Edmonton, Burnaby, Moncton, Dartmouth, and Mount Pearl. In the West GTA, orders over $50 placed before 4 PM qualify for free delivery.

Built for the way fleets work

Quick Fit Parts has designed its service around the needs of fleet managers and repair shops:

- **Flexible returns:** no restocking fees, and returns accepted beyond the usual 90-day window.
- **Warranty support:** warranty work orders are accepted.
- **Real support:** an experienced team is available Monday to Saturday, 7 AM to 7 PM.
- **Planning tools:** a free Fleet Downtime Calculator helps fleets put a dollar figure on every day a truck is off the road, and a Dealer Margin Calculator supports resellers.
- **Rewards:** customers earn points on purchases toward discounts and free products.

A partner, not just a supplier

The company's guiding principle is simple: trust and knowledge. Quick Fit Parts works only with manufacturers it considers dependable, stands behind the parts it sells, and focuses on long-term relationships rather than one-time orders.

For fleets that cannot afford downtime, that combination of the right part, the right fit, and people who answer the phone makes a real difference.
